

BENEFITS OF CLOUD PHONE SERVICE FOR SMALL BUSINESSES

Are you an SMB considering upgrading your phone service to the cloud?

Here are some reasons why you should:

COST SAVINGS

Your business has a lot of expenses but overpriced phone service doesn't have to be one of them. By switching to cloud-based phone service you can save up to 40% over legacy telecom. What would you do with those savings?

SCALABILITY

As your business grows your phone system should be able to keep up. With a cloud-based phone system, you'll get more flexibility to add and manage service as needs change.

DISASTER RECOVERY

How can you ensure uninterrupted communications when it's difficult to foresee natural disasters or outages? Cloud-based phone service will provide you with more reliability, resiliency, and additional capabilities to help you be prepared before disaster can even strike.

BUILDABILITY

Not all business needs are the same, which is why you should be able to add on features you need and not have to pay for features that you don't. Cloud-based providers, like IntelPeer, offer additional cloud-based functionality such as IVR and call routing to help you manage incoming calls.
