

## Take the first step to cloud communications using legacy equipment

Want to make the move to cloud-based phone service but not ready to say goodbye to your legacy equipment? Get the best of both worlds by enabling older telephony equipment for SIP trunking with IntelPeer’s on-premise TDM conversions.

Protect capital investments with a cost-effective solution that doesn’t require you to upgrade or retire legacy equipment in order to connect to our Atmosphere® SIP and Voice Services. See immediate benefits such as an average of 40% telecom cost savings, scalability, and disaster recovery while setting up for your future move to cloud communications.

### Enable your non-IP PBX for SIP

The process of unlocking the cloud for legacy equipment is simple. You’ll receive a device that supports single or dual PRI configurations and is pre-engineered to your equipment specifications. After an easy installation to connect the device with your PBX, the PRI interface is converted to SIP. You’re now ready to start benefitting from our carrier-grade SIP and voice services.

### Enjoy secure, reliable, and flexible voice services

IntelPeer’s Atmosphere® Voice Services delivers global voice connectivity over a highly-available and secure all-IP network. Our services are certified and validated with nearly all of the PBX platforms on the market, making it even easier for you to leverage your existing equipment. With multiple pricing plans and flexible connectivity options, you can deploy a solution that best fits your business needs.

Plus, our products are backed by an award-winning team of experts who are there every step of the way to help design solutions, get your services turned up quickly, and provide 24/7 technical support.

## Why Atmosphere® Voice Services?

### Deploy Quicker

Our technology expertise gets you up and running quickly and correctly the first time.

### Manage Costs

Built-in savings over legacy telecom with a complete set of features and predictable monthly spending.

### Increase Uptime

Survive site outages with redundant connectivity, network-based routing, and automatic failover.

### Scale On Demand

Quickly add capacity to meet changing demand and business needs.
